Languages: English

Currently Lives: Botswana

OPERATES AT UNCHARTED AFRICA CAMPS IN BOTSWANA

Tobokani Chemical Seatso, widely known as Chemical has a diverse background that makes him an engaging and effective guide. Chemical spent a decade serving as a soldier in the Botswana Defence Force and during this time his efforts were focused on anti-poaching in the country's national parks and game reserves. Chemical's endeavours as a soldier saw him immersed in the Botswana wilderness and fostered a deep appreciation for nature and all its wonders.

Upon leaving the Defence Force, Chemical made the transition to the tourism industry, seeking out a career that would allow him to further explore the passion for nature he'd developed. In 2014 he began guiding in the Okavango Delta and he relished the opportunity to share his knowledge and love to Botswana's diverse ecosystems with visitors from around the world.

Four years after his guiding debut, Chemical joined Uncharted Africa, undergoing the outfit's famously rigorous guide training and then commencing the next phase of his guiding career in the Makgadikgadi Pans. The region holds a particular allure for this private guide who quickly found himself captivated by its fascinating landscape and rich historical significance.

Beyond his guiding profession, Chemical is also an avid cattle farmer with a keen interest in the importance of sustainable practices in agriculture. His time in the wilderness has also afforded Chemical extraordinary photographic opportunities and he's developed an interest in wildlife photography, combining his love of the natural world with artistic expression.

When guiding, Chemical has a particular interest in studying the adaptations of desert-adapted species and how nature influences the evolution of all living creatures.
